

Central Terminal Area Refurbishment Program Terminals One & Six Fact Sheet

• Project Description

Terminals 1 and 6 have taken on a brighter, more modern look as the result of a refurbishment program now underway throughout the LAX Central Terminal Area. From new, lighter color schemes to the use of contemporary design materials, Terminals 1 and 6 have received a first-class upgrade with:

- Restrooms: all restrooms were remodeled and upgraded with new fixtures, tiles, flooring and other finishes; in T-1, a new restroom for use by families or the physically challenged was also added
- Lighting: lamps and light fixtures were upgraded to produce more light while consuming less energy
- Ceilings: stained, discolored tiles and skylights were replaced
- Flooring: travertine tile throughout the terminal was refinished to restore its original color; stained, damaged floor tiles in the baggage claim area were replaced; new carpeting reflects the brighter color palette
- Walls: interior and exterior walls were painted; dark wall coverings were replaced with tiles that complement the lighter color scheme
- Elevators: interiors of passenger elevator cabs were remodeled

• Traveler Benefits

Travelers using these terminals will find them more inviting and comfortable thanks to improvements ranging from enhanced lighting and fully renovated restrooms to fresh, sophisticated interior finishes and materials.

• Traveler Impacts

Both terminals remained open for normal operations during the renovation. The most significant traveler impact was the staggered, temporary closure of restrooms as those facilities underwent remodeling. Travelers may have also noticed construction-related noise and other changes, such as construction barriers and minor detours throughout the terminals.

• Construction Dates

Terminal 1: September 2006 – September 2008

Terminal 6: November 2007 – November 2009

New mosaic tiles have been added to the columns throughout terminal Terminal 6. (J. Berkowitz)

Restrooms at Terminal 1 have been upgraded with new fixtures, tiles and silvery metallic paneling

- **Costs**

Terminal 1: \$3 million

Terminal 6: \$2.5 million

- **Funding**

LAX Airport Revenue Fund

- **Contractor**

Los Angeles World Airports Construction and Maintenance Division undertook the various T-1 and T-6 refurbishment projects.

- **Environmental Elements**

High-efficiency fluorescent lighting has replaced the previous system, reducing energy consumption while producing more light. Tinted skylights reduce the building's heat load and cut air conditioning energy usage. Low-flow plumbing fixtures in restrooms reduce water consumption. New floor tiles containing a high percentage of recycled material were used in the baggage claim areas.
