California State Airport Noise Standards Quarterly Report

LAWA Noise Management

Environmental Affairs Office: Airports Planning
Checked by: Dan H. Yeung, Environmental Supervisor II
Prepared by: James C. Dunagan III, Environmental Specialist II
Prepared on: March 18, 2016

NOTES

Noise Contours are generated using RealContours which supports the Federal Aviation Administration’s Integrated Noise Model (INM) version 7.0. The modeled contours are based on annualized operational information gathered for the 12-month period ending December 31, 2015. The RealContours program is run yearly and the resultant contour is adjusted to the current quarter’s Noise Monitoring Station (NMS) annual average aircraft CNEL.

Sources of information include FAA’s Automated Radar Terminal System (ARTS) Data and FAA Tower Traffic Records.

Dwelling unit calculations are based on estimates made using 2009 assessor information, supplemented with land use surveys. Population estimates reflect the increases from the 2000 census data, (including 2009 estimates), for persons per dwelling unit. The land use database used to generate this report was updated on February 24, 2015 and reflects all noise mitigation performed through LAWA’s Soundproofing Program, which is now complete.

Map projection is in State Plane Feet based on North American Datum of 1983 (NAD83)
