Water Conservation and Management

Los Angeles World Airports (LAWA) is committed to maximizing water efficiency and conservation in all of its operations. LAWA conserves water by: installing low flow toilets, urinals, and sinks; using reclaimed (recycled) water, using drought tolerant landscaping; and conducting education and outreach about the importance of conserving water.

Potable Water Savings

LAX Potable Water Use

Total potable water usage in 2018

</table>

5.5 gallons of potable water per LAX passenger.*

*lowest since 2010.

Water Efficiency

~95% of toilets and urinals at LAX are low or ultra-low flow fixtures, resulting in average savings of 1.25 gallons per flush.
Water-Efficient Landscaping
- Since 2017, 27,500 square feet of grass or lawn have been replaced with artificial turf.
- Water savings measures include: smart irrigation systems, irrigation at night, weed control, and installation of low-flow sprinkler systems.

Reclaimed (Recycled) Water
- About half of LAX’s landscaped areas use reclaimed water.
- Piping for reclaimed water has been installed at the Bradley West Terminal and most new terminal projects.
- The LAX Central Utility Plant cooling tower will use reclaimed water.
- LAX uses reclaimed water for: street sweeping, construction dust control, car washing, and other non-potable uses.

Stormwater Management and Treatment
- LAWA performs inspections at LAX and VNY per stormwater rules and regulations.
- Tenants are trained by LAWA on regulations on a regular basis.

North Central Outfall Sewer Connection Project
- Connect Imperial Retention Basin and the Hyperion Water Reclamation Plant.
- Project will minimize water pollution during a rain event by sending stormwater runoff to the Hyperion treatment facility instead of flowing into the Santa Monica Bay.
