As a covered entity under Title II of the Americans with Disabilities Act, the City of Los Angeles does not discriminate on the basis of disability and, upon request, will provide reasonable accommodation to ensure equal access to its programs, services and activities. Alternative formats in large print, braille, audio, and other formats (if possible), will be provided upon request.

COMMONLY USED ACRONYMS

ADA	Americans with Disabilities Act	LADWP	Los Angeles Department of Water & Power
AOA	Airfield Operations Area	LAWA	Los Angeles World Airports
CBP	Customs & Border Patrol	MSC	Midfield Satellite Concourse
CGMP	Component Guaranteed Maximum Price	NTP	Notice to Proceed
CTA	Central Terminal Area	PBB	Passenger Boarding Bridge
EAC	Estimate at Completion	PDG	Planning & Development Group
EIR	Environmental Impact Report	RON	Remain Over Night
FAA	Federal Aviation Administration	RSA	Runway Safety Area
FIS	Federal Inspection Services	SSCP	Security Screening Checkpoints
FLSS	Fire & Life Safety Systems	TBIT	Tom Bradley International Terminal
IT	Information Technology	TIA	Time Impact Analysis
LADBS	Los Angeles Department of Building and Safety		

Purpose

This report is a tool to provide status of the Capital Projects for the Planning & Development Group. The report is divided into Elements; and includes a status update for active projects followed by the schedule, budget and change order summary. The Program Wide tab includes the budget summary.

Airside Element

The Airside Element consists of multiple projects necessary for accommodating the movement of aircraft between the north and south airfields; reconfiguring traffic movement to accommodate the modernization programs; and provide airfield improvements as required by Airfield Operations, the FAA and other Federal and State regulatory agencies.

Utilities and Landside Element

These capital improvement projects implement roadway, landside, utility and infrastructure enhancements that support the Terminal and Airport operations within the CTA and include the following:

Roadway enhancements focused on improving the passenger experience within the CTA. These improvements are designed to increase vehicular throughput, alleviate congestion on roadways and in parking structures, enhance curb space and security for arriving and departing passengers and various ADA improvements.

Landside improvements typically related to public transportation access, fueling facilities, warehouse and cargo areas, as well as access roads and perimeter fencing.

Terminal Element

Most of LAX's terminals have served their purpose without major renovations or modernization efforts for years. As needs change, the terminal spaces and structures need repairs, upgrades, modernization, and standardization to satisfy these changing demands and include the following:

Terminal-wide improvements that typically consist of similar types of work implemented across two or more terminals, such as the Terminal Core and APM Interface work.

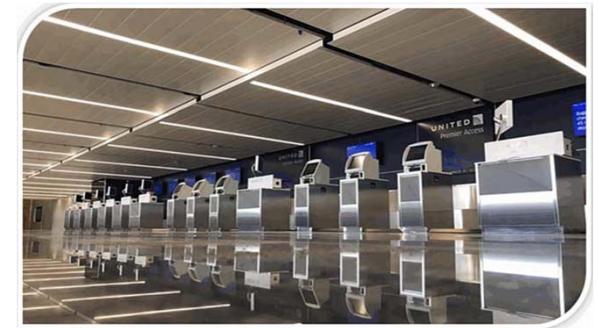

Terminal-specific improvements which typically address the enhancement and/or renovation of one or more parts of a specific terminal, such as the TBIT Miscellaneous Build-out project, etc.

MSC Element

The Airside Element consists of multiple projects necessary for accommodating the movement of aircraft between the north and south airfields; reconfiguring traffic movement to accommodate the modernization programs; and provide airfield improvements as required by Airfield Operations, the FAA and other Federal and State regulatory agencies.

Tenant Improvements Element

Many terminal improvements are managed directly by the airlines and concession stakeholders. LAWA adopts an oversight role for these improvements, ensuring that these renovations improve or enhance the customer experience, adhere to the LAWA Design and Construction Handbook and maintain strict safety and security mandates. The projects reported within this section may be in various stages, e.g. planning, design or construction.

The projects reported within each Element are categorized into one of the following three categories.

Projects in Construction

Projects in this category have an awarded construction contract and are characterized by a blue-bar. Each project in this category presents the scope of work, a progress narrative, a Budget and Schedule graphic to depict progress and a narrative describing the current status or issues.

Projects in Design

Projects in this category are in the Design or Bid stage and do not yet have an awarded construction contract. These projects are characterized by a green-bar and each project presents the scope of work and a narrative describing current status or issues. Once a construction contract is awarded, these projects will be transferred from this category into the Projects in Construction category.

Projects in Planning

Projects in this category are in the Planning stage and are undergoing conceptual design. These projects are characterized by an orange- bar and each project identifies the scope of work and a narrative describing current status or issues. Once the conceptual design has sufficiently progressed, these projects will be transferred from this category into the Projects in Design category.

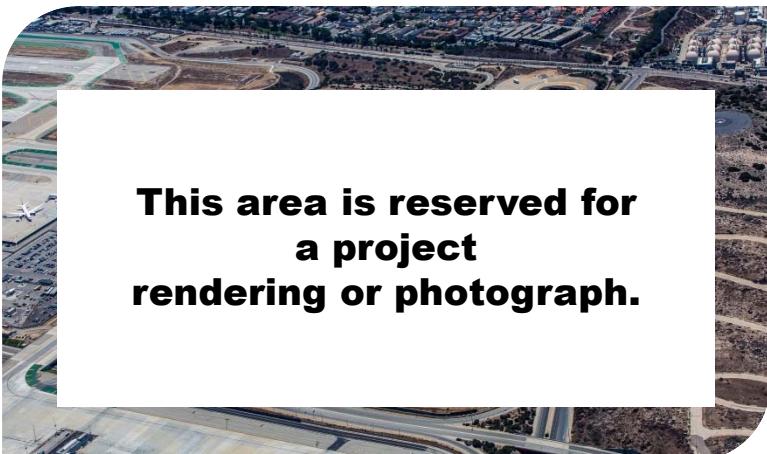

Title of Project

PROJECT STATUS OVERVIEW

Project Description

The narrative provides a summary overview of the project scope.

Recent Project Achievements

This section highlights project achievements during the reporting period.

Budget Status

This section discusses the project's budget performance.

Schedule Status

This section discusses the project's schedule performance.

As of: November 1, 2015

Status	Completion Date	Variance to Baseline Finish (Days)
On Track	2016-12-31	0

This area presents the schedule information for key project milestones and provides a status indicator for whether it is ahead of schedule, behind schedule or on-time.

LAX

Project Cost

Calculated as Incurred divided by Estimate at Completion (EAC), this pie chart depicts the percentage incurred for the expected cost.

Construction Cost

Calculated as Incurred divided by Construction Contract value, this pie chart depicts the percentage incurred for the construction contract.

Construction Duration

Calculated as Days Elapsed divided by construction contract duration, this pie chart depicts the percentage of contract time elapsed.

Contingency

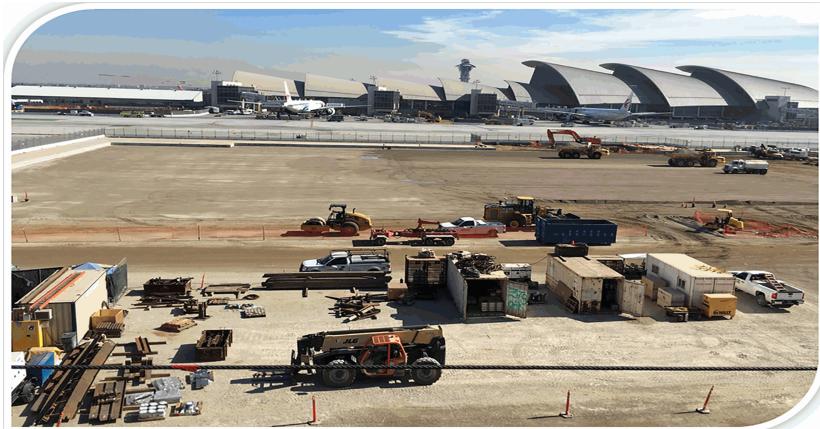

This pie chart describes the percentage of contingency already allocated and the remaining amount.
Note: Funds not used are returned to the Program Unallocated Contingency account.

*Costs are rounded off to the nearest dollar

Taxiway T - Phase 2

Project Description

The Phase 2 of the Taxiway T project consists of the completion of the remaining pavement Northern Taxiway portion and utility work to achieve continuous alignment of Taxiway T between Taxiway C to the south and Taxiway D to the north.

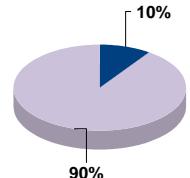

Recent Project Achievements

Through December 2017, the contractor commenced site survey and existing utility investigation activities. The team anticipates issuing construction NTP in early January 2018.

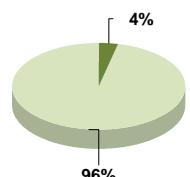

Budget Status

The project is trending on budget.

Contingency

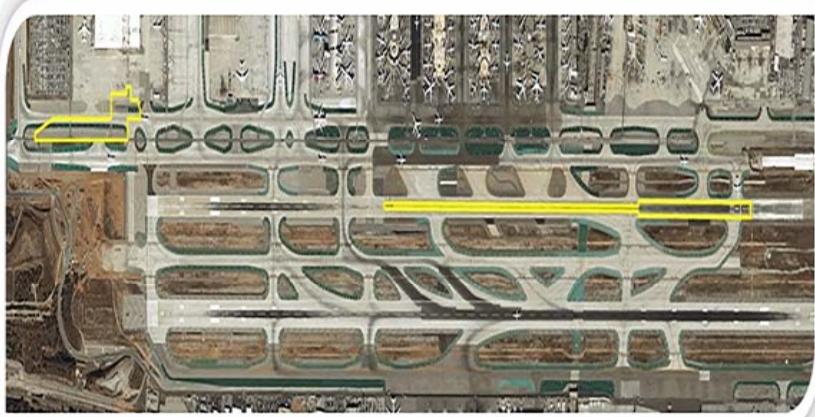

Runway 25R Reconstruction

Project Description

This project is a result of LAWA's decision to descope components from the Runway 7L-25R Safety Improvement and Pavement Rehabilitation Project on January 31, 2017. The repackaged scope comprises the following:

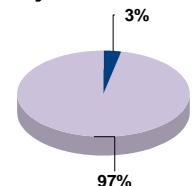

- Reconstructing a 100-foot wide keel section of Runway 25R extending from Taxiway F to Taxiway G;
- Reconstructing the 50-foot wide main wheel gear section of Runway 25R from Taxiway G to Taxiway N;
- Reconstructing the Runway 25R/Sepulveda Tunnel cap structure;
- Constructing the Taxiway B17 connection to Taxiway C; and
- Installing new airfield lighting and other miscellaneous items.

Recent Project Achievements

Through December 2017, the contractor demolished existing pavement and prepared the subgrade for the asphalt base. The contractor also commenced the concrete pavement in the Test Section Area.

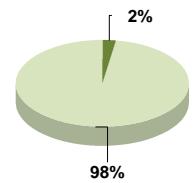

Project EAC Cost

Contingency

Project Description

The Airport Surface Management System (ASMS) will provide the essential airfield situational awareness and business intelligence needed to effectively predict, detect and respond to critical operational issues and to realize opportunities for operational improvement, such as increased taxiing efficiencies and optimized gate utilization.

Recent Project Achievements

Through December 2017, the contractor installed the ASMS in the FAA Air Traffic Control Tower and is progressing the implementation of the Help Desk/ Customer Communications Plan, which serves as primary customer interface for all service issues.

Budget Status

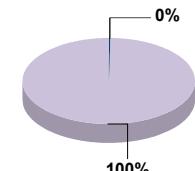

The Board awarded the contract on July 13, 2017 and approved the project budget. Staff initiated the administrative process to include the project budget within this report and are monitoring the approval process.

The contractor will submit pay requests as phases are completed.

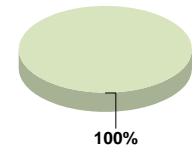

Schedule Status

The project is tracking to schedule.

Taxiway C14

LAX

The proposed construction of a new Taxiway C14, enabling projects and airside vehicle service road will provide unimpeded taxiway flow between the north and south airfields as well as a dual parallel taxiway capability for the North Runway complex. The project will include demolition and/or relocation of existing facilities such as Remain Over Night (RON) parking, water deluge tank, hangar facilities, electrical vault, and other infrastructures as enabling projects to facilitate the construction of Taxiway C14. Access along the existing landside roadway at Coast Guard Road and the tunnel roadway at World Way West may be affected by the construction of Taxiway C14.

Through December 2017, the designer submitted the 60% design documents and the project team commenced their review. The project team is preparing a presentation on potential American Airlines Deluge System locations and anticipates briefing the Executive Team in the first quarter of 2018. The design is anticipated to complete and be ready for bidding in the 2nd quarter of 2018.

North Airfield Exit Taxiways

LAX

This project includes constructing new exit taxiways connecting Runway 6L-24R and Runway 6R-24L. Project also includes reconstructing sections of Runway 6R-24L where it intersects the new exit taxiways and connecting taxiways at Taxiway E and Taxiway D.

The CEQA/NEPA and EA/EIR review process is underway and designer selection is anticipated in the third quarter of 2018.

Taxiway A & B Improvements (Phases 1 - 3)

VNY

Taxiway A supports about 70% of the ground movement of jet aircraft at Van Nuys Airport (VNY). The existing Taxiway A and Taxiway B are deteriorating and it is no longer economical or practical to continue maintaining the pavement. This project rehabilitates the pavement, including grading, pavement markings, airfield lighting and airfield signage, where applicable.

During December 2017, the project team met with LA City Fire Department (LAFD) / Cal Fire / Air Traffic Control (ATC) to review the revised phasing plans, mitigation and impacts. The designer submitted the 60% design documents and the project team commenced their review. It is anticipated that construction bids for the first phase will be advertised in the second quarter of 2018 and design of the second phase will also commence at that time.

Taxiway D Extension between Taxiway C-14 and Taxiway AA

LAX

This project will construct Taxiway D Extension between Taxiway C14 and Taxiway AA. It includes design and construction of a new Taxiway that extends the existing Taxiway D from the new cross-field Taxiway C14 to Taxiway AA. The project also includes enabling projects that require relocation of the Bus Maintenance/Storage and LAWA Maintenance Facility, reconfigure a section of the Fuel Truck Filling Facility, and construct the new taxiway between Taxiway AA and Taxiway C14. The taxiway width will measure 82 feet, excluding shoulders, and the taxiway length will measure approximately 4,200 feet. It also includes the construction of in-pavement centerline lights, edge lights, signage, and pavement markings.

During December 2017, the design team continued survey and geotechnical field investigation work. The project team is evaluating the construction schedule in conjunction with the environmental approval process and other future airfield initiatives. The design is expected to complete by mid-2019.

AIRSIDE ELEMENT PROJECTS IN DEVELOPMENT

Runway 7R-25L Rehabilitation

LAX

The intent of this project is to reconstruct deteriorated concrete pavements of Runway 7R-25L, Taxiway H and associated exit taxiways to extend the useful life of the pavement and minimize airfield operational impacts.

Proposals for design services were received on December 12, 2017 and the project team commenced their evaluation. It is anticipated that a selection and a recommendation to award will be presented during the first quarter of 2018.

LAX Special Equipment Storage Facilities

LAX

Construction of two prefabricated steel buildings to store vehicles and equipment for Airfield Operations, Fire Department and Airport Police. The Imperial Highway Garage Facility will include 6 parking bays, restrooms, fire sprinklers, ventilation, electrical, IT and necessary methane mitigations as required by LADBS. Site improvements would include grading, retaining wall, AOA fencing and access gate, asphalt paving and drainage. The Airfield Fire Fighting Station 80 garage facility will be a single bay structure with fire sprinklers, ventilation, electrical, IT and necessary methane mitigations as required by LADBS. Site improvements would include grading, AOA fence modification, utility relocation, and drainage.

Staff is coordinating with Stakeholders to finalize the implementation plan. An Executive Management presentation to determine next steps is being scheduled.

Maintenance Facility Relocation

LAX

This project involves the phased relocation and consolidation of five existing Facilities Maintenance and Utility Group facilities and procurement services warehouse. The existing facilities, located east of Taxiway AA, south of Taxiway E and north of World Way West, need to be relocated to allow for future airfield construction. Site improvements would include structures and areas to accommodate existing staff and functions, parking, electric vehicle chargers, grading, retaining walls, AOA fence, AOA access post and drainage.

Staff is coordinating with Stakeholders to finalize the implementation plan.

Lot C Improvements

Project Description

This project will remodel the restroom facilities of the Lot C Bus Depot Building to meet current ADA requirements and reconstruct the access ramp between the parking lot and the building entrance to ADA standards. Related project work also includes updating the plumbing, electrical connection and fixtures in the Bus Depot.

The Bus Shelter scope is to remove and replace nine existing parking lot shelters. In addition, new shelters with solar lighting will be installed at six bus stop locations that do not currently have shelters. The project also includes procurement and installation of a separate shelter between Terminals 1 and 2 on the Departures level of the CTA. One salvaged shelter from Lot C will also be installed adjacent to the existing shelter at the employee stop.

As of: December 31

Lot C Improvements (Construction)

	Status	Construction Start	Construction Finish	Variance to BL Finish
Lot C Improvements - ADA Improvements - Construction NTP	Started	1-Nov-15		
Lot C Improvements - ADA Improvements - Substantial Completion	Complete		26-Feb-16	
Lot C Improvements - Bus Shelter - Construction NTP	Started	1-May-17		
Lot C Improvements - Bus Shelter - Substantial Completion	○		30-Apr-18	
● Awaiting NTP ○ Target Milestone ● On-Time	● Behind Schedule ● Requires Mitigation			

Recent Project Achievements

The ADA construction effort at the Bus Depot is complete. The number of bus shelters and their location is being revised to accommodate the LAMP team's site configurations.

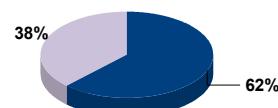

Budget Status

The project is currently \$375,658 over budget, due to unforeseen conditions at the Bus Depot building and additional LAWA Maintenance construction resources. This negative variance may be partially off-set by a reduction in the number of shelters that may result from the LAMP team reconfiguration of the site.

Schedule Status

Due to the required reconfiguration of Lot C and the coordination with the LAMP team and their contractor, the project is delayed, when compared to the original implementation schedule.

UTILITIES & LANDSIDE ELEMENT PROJECTS IN DELIVERY

RON West Electrification Project

Project Description

This project provides the electrical infrastructure and equipment to support implementation of nine 400 HZ fixed ground power units and infrastructure to support seven future electric battery charging stations, resulting in emission reductions.

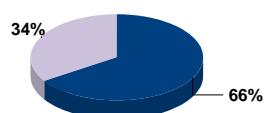

Recent Project Achievements

During December 2017, LADWP pulled all required underground cable and commenced splicing and terminations to the new switchboards.

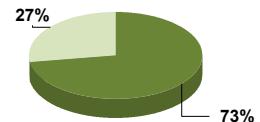

Budget Status

The project is trending on budget.

Project EAC Cost

Construction Cost

Schedule Status

The project is 246 days delayed, primarily due to LAWA directed changes requiring LADWP redesign. The project is trending to complete in January 2018.

North Central Outfall Sewer (NCOS) Connection

Project Description

This project will capture the storm water flow in LAX's central/southwest area known as the Imperial Watershed and meet the requirements set forth in MOU between Los Angeles World Airports (LAWA) and the Los Angeles Bureau of Sanitation (LA SAN). Scope of work includes a new connection from LAX Pershing/Imperial Detention Basin to the North Central Outfall Sewer (NCOS) Interceptor.

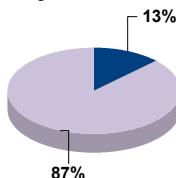

Recent Project Achievements

Through December 2017, the structural, shoring and grading permits are submitted to LADBS and being reviewed.

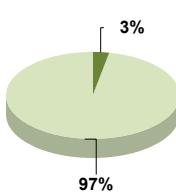

Budget Status

The project is trending on budget.

UTILITIES & LANDSIDE ELEMENT PROJECTS IN DEVELOPMENT

Drainage & Expansion Joint Seal Improvements for Parking Structures 1, 3 & 6 - Phase 2

LAX

This project will repair and/or replace the expansion joint seals and drainage systems within Parking Structures 1, 3 & 6 at LAX to prevent future leaking through the deck slabs and ponding of water on the surfaces. The scope of work includes replacing expansion joint seals and covers, replacing drainage piping, making improvements to the garage decks to correct surface drainage, and sealing the upper decks of the parking structures.

The project team identified issues with the construction bids received during the bidding phase. The project team is working through those issues and anticipates commencing construction late in the first quarter of 2018.

Secured Area Access Post -Westside

LAX

This project will develop a uniform prototype for the Secured Area Access Posts (SAAP) at LAX. The SAAP's are outdated and in poor condition, operationally and physically. The primary focus of this project is to analyze locations for a new SAAP on the westside of LAX and design and construct a prototype standard post facility for future improvements.

This project will likely be designed as a stand-alone project, but constructed with the Continental G.O. Building Demolition project. Design activities are anticipated to complete in the fourth quarter of 2018.

Bradley West Off-Airport Traffic Mitigation - Landside

LAX

This project will add a second northbound right turn lane on Sepulveda Boulevard at eastbound Imperial Highway in order to comply with the EIR for the Bradley West Project. This project will also implement similar improvements at the intersection of eastbound Arbor Vitae at Aviation Boulevard.

The CalTrans encroachment permit is delayed, which has impacted the overall design schedule for this project. Traffic studies, preliminary design and coordination activities are underway with CalTrans, the Los Angeles Department of Transportation (LADOT) and the Urban Forestry Division to develop the project scope and mitigate potential environmental issues. These coordination activities are anticipated to continue through the second quarter of 2018.

Fire Drill Training Facility Recommissioning

LAX

This project will return the LAX Fire Drill Training Facility to full operation for live jet fuel fire training exercises in order to comply with FAA regulations. The scope of work includes removal of the remaining two UST, all underground fuel piping, the original wastewater pretreatment system and remaining motor control and electrical panels. New infrastructure will include AST for jet fuel, waste fuel, water storage and a wastewater pretreatment system. New electrical panels and a new controls system will also be installed.

The project team is finalizing the design and the Request for Construction Bids documentation and anticipates releasing it in the first quarter of 2018.

UTILITIES & LANDSIDE ELEMENT PROJECTS IN DEVELOPMENT

CTA Exterior Pedestrian Wayfinding and Signage Project

LAX

This project seeks to enhance passenger experience throughout LAX by developing exterior wayfinding signage alternatives to create a uniform, effective signing system for pedestrians in the CTA.

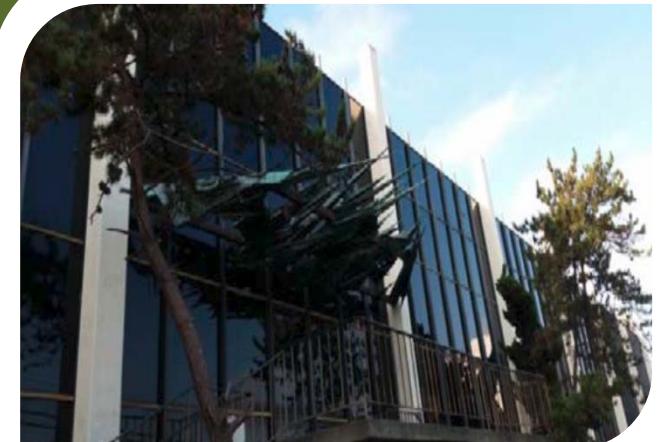

The project team is finalizing the scope validation and procurement activities are anticipated to complete in the second quarter of 2018.

Continental G.O. Building Demolition

LAX

The goal of this project is to demolish the former Continental Airlines General Office (G.O.) Building. The scope of work includes hazardous material abatement, rectifying utilities serving adjacent facilities that are interconnected with utilities within the G.O. Building, and constructing new exterior wall skin in locations where removal of the G.O. Building will result in exposing walls of adjacent and connected buildings.

The project schedule was impacted by the EIR approval process. The project team assessed that delay and re-sequenced construction procurement activities for the middle of 2018. This demolition project will likely be packaged with the SAAP project.

Century Boulevard Vehicle Checkpoints

LAX

This project will examine prototypical elements (canopies, lighting, traffic controls) to enhance the vehicle checkpoints at the entrances to the CTA.

The project schedule is delayed due to scope clarifications with the various stakeholders. The design and procurement phases have been re-sequenced to the third quarter of 2018.

Recycled Water Extension

LAX

This project will complete the Recycled Water (RW) piping and building connection infrastructure on the LAX campus to receive and distribute advanced treated recycled water to be produced at the Hyperion Water Reclamation Plant. Included will be the placement of 8800 feet of 12" RW piping and 1600 feet of 6" RW piping , along with the appropriate valves, meters, and system appurtenances necessary to convey advanced treated water across the LAX campus. Points of connection include, but are not limited to the Midfield Satellite Concourse, Bradley West, Central Utility Plant, Terminal 1.5, and Concourse 0.

The project team is validating the scope, construction delivery method assessment and coordinating with other construction efforts in and around the CTA.

CTA Domestic Water and Fire Water Pipe Replacement

LAX

This project will implement necessary improvements to increase reliability and redundancy within the domestic water system and mitigate the existing fire flow deficiencies at Terminals 1 through 8.

The project team is validating the scope, construction delivery method assessment and coordinating with other construction efforts in and around the CTA.

CTA Departure & Arrival Levels Security Bollards Phase 2

LAX

The purpose of this project is to provide additional passenger security at the departure and arrival levels of the Central Terminal Area (CTA) by installing prefabricated security bollards at various locations in front of terminal entrance doors.

The project team is finalizing the scope validation and construction delivery method assessment for this project. Staff will analyze construction bids in January 2018 and will commence construction in the first quarter of 2018.

Power Distribution Facility

LAX

This initiative will provide for a new Power Distribution Facility and associated power distribution duct banks and infrastructure to meet the future power demands as noted in the LAX Utilities Infrastructure Plan. Additionally, this facility will significantly mitigate the power anomalies and interruptions in the LADWP power distribution system that result in power interruptions to our terminals and buildings west of Sepulveda Blvd (primarily the CTA and West side).

Staff initiated the process to develop an ordinance to utilize alternative delivery methods and competitive sealed proposals for this project in advance of the contract procurement process.

UTILITIES & LANDSIDE ELEMENT PROJECTS IN DELIVERY

BUDGET OVERVIEW AS OF: 12/31/2017

Terminal 2 Improvement Program

Project Description

Terminal 2 is the second largest international terminal at LAX. The terminal is approximately 30-years old and in need of improvements. LAWA initiated a Terminal 2 Improvement Program designed to significantly improve the terminal's level of service. This improvement program will provide major upgrades to the ticket lobby, baggage screening, baggage claim, and concourse areas, as well as construction of all new concessions and upgrades of all systems (electrical, mechanical, telecom, etc.) that serve the terminal.

As of: December 31

Terminal 2 Improvement Program (Construction)

T2 Systems - Milestone 8 - Overall Construction - Substantial Completion

Status

Awaiting NTP

On-Time

Behind Schedule

Requires Mitigation

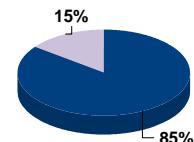

Recent Project Achievements

Through December 2017, the contractor has completed the construction work. The project team is focused on close-out activities and the negotiation and settlement of all open cost proposals.

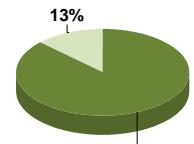

Budget Status

The project is trending on budget.

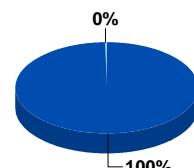

Project EAC Cost

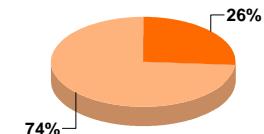

Construction Cost

Construction Duration

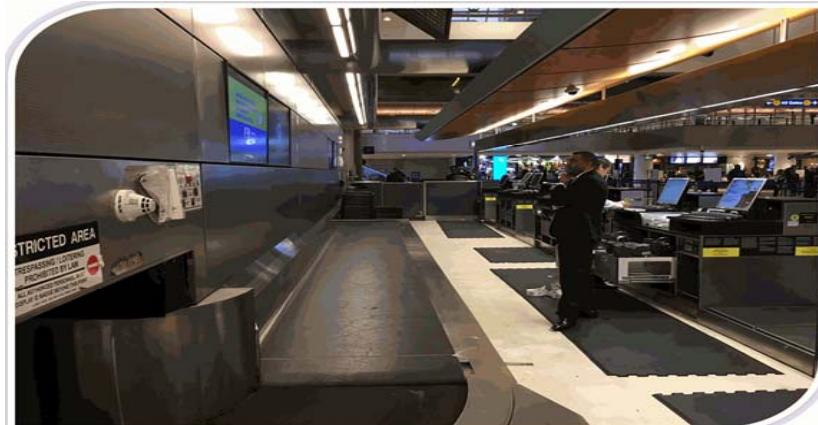

Contingency

Project Description

This project will provide a total of 12 additional ticket counters to the ticketing level, Aisles A & C, of Tom Bradley International Terminal along with a conveyor belt extension to accommodate the new ticket counters. There will also be additional office spaces to house future airline tenants. The installation of the extended conveyor belt & ticket counter back wall monitors/LED signs will be performed by other vendors who are not under GSD's contract.

As of: December 31

Construction Duration

Contingency

Airport Police Station & Facilities Program

LAX

This Project includes the redevelopment of approximately 12 Acres at the northeast corner of Westchester Parkway and Loyola Blvd for a new Airport Police Facility (APF). The redevelopment will include a new building, a new parking structure, and a series of new indoor & outdoor functional spaces for LAWA's Airport Police Division (APD). This may include, but not be limited to, the Office of Operations, Office of Support Services, Office of Homeland Security & Intelligence, Traffic & Security Group, Bomb Disposal Unit, K-9 Unit, Airport Response Coordination Center (ARCC) and Emergency Services Unit.

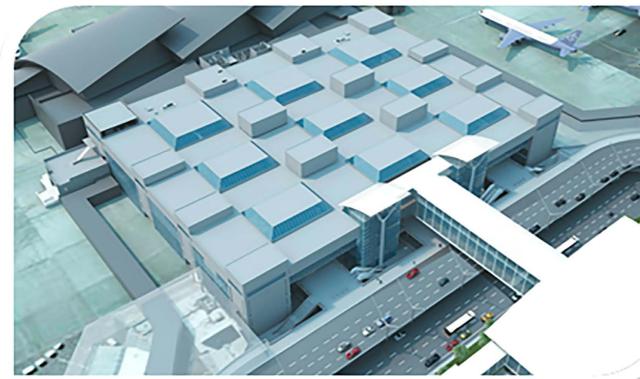

During December 2017, the project team released an addendum and conducted a second round of workshops. Proposals are anticipated in January 2018.

Terminal 5.5 Core & APM Interface / TBIT Core & APM Interface

LAX

This project will provide the vertical circulation elements in TBIT, Terminal 5 and Terminal 7 to accommodate passenger circulation and connections to and from the APM stations and parking garages.

Through December 2017, the project team interviewed the proposers and have identified the apparent lowest ultimate cost proposer. Staff is preparing a recommendation to award the contract which will be presented to the Board during the first quarter of 2018.

MSC ELEMENT PROJECTS IN DELIVERY

Midfield Satellite Concourse (North Gates)

Project Description

The MSC will function primarily as an international departure and arrival concourse. The MSC will have a flexible flight line allowing it to accommodate both wide and narrow body aircraft.

Part A, the North Concourse, includes 9 wide body gates. Part B, the North Extension, includes 2 wide body gates and Part C, the South Concourse, includes 8 wide body gates. The scope of the MSC project includes the construction of Part A, Part B, and 1 gate of Part C for a total of 12 gates. A Passenger Tunnel and Gateway Building will connect the MSC to the TBIT. A separate Baggage/Utility Tunnel will also be constructed between the MSC and TBIT. New aprons will be constructed on both sides of the MSC and Taxilane C12 will be constructed west of the MSC.

As of: December 31

Midfield Satellite Concourse - North Gates (Construction)

	Status	Construction Start	Construction Finish	Variance to BL Finish
MSC North Gates - NTP Phase 1	Started	1-Apr-15		
MSC North Gates - Substantial Completion	●		4-Mar-20	-50
MSC North Gates - Final Acceptance	●		9-Sep-20	-50
● Awaiting NTP ● Behind Schedule ○ Target Milestone ● Requires Mitigation ● On-Time				

Recent Project Achievements

In December 2017, the contractor completed the basement walls at the southern end of the Concourse and commenced installation of the glass curtain wall and the roof panels.

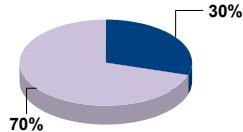

Budget Status

The project is trending on budget. The project team is negotiating design changes related to the LADWP Substation. In addition, the team is working to quantify the hazardous material remediation anticipated on the east side of the Passenger Tunnel.

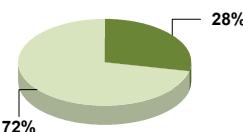

Schedule Status

The project is 50 calendar days delayed, primarily due to issues around the core foundations and steel fabrication. In addition, the Taxiway T turnover date has slipped from November 22, 2017 to an estimated date of January 5, 2018, which impacts the East Tunnel work.

MSC ELEMENT PROJECTS IN DELIVERY

MSC/BW Baggage Optimization Project

Project Description

The Baggage Optimization Project (BOP) is aimed at providing a simple comprehensive baggage solution for both the Midfield Satellite Concourse (MSC) and the Tom Bradley International Terminal (TBIT), with additional makeup capacity, enhanced operations and redundancy, and an integrated distribution system. This project constructs the infrastructure elements for BOP; the baggage handling system will be designed and installed under a tenant lease agreement.

As of December 31

MSC/BW - Baggage Optimization Program (Construction)

MSC/BW - Baggage Optimization Program - Construction NTP

Status	Construction Start	Construction Finish	Variance to BL Finish
Started	13-Dec-16		
● Awaiting NTP

MSC/BW - Baggage Optimization Program - Far East, Mixing Box, North BHS Structure, and BW Interface

MSC/BW - Baggage Optimization Program - North BHS Tunnel – Substantial Completion

Status
● Awaiting NTP
○ Target Milestone
● On-Time
● Behind Schedule
● Requires Mitigation

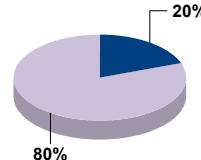

Recent Project Achievements

In December 2017, underground utility, foundation and basement wall work continued at the North BHS Structure site. In addition, shoring pile installation was completed and soil excavation and shoring work started at the Far East Tunnel Area.

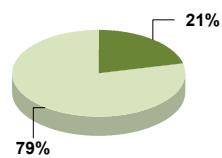

Budget Status

The project is trending on budget.

Terminal Commercial Management (TCM)

LAX

The Terminal Commercial Management (TCM) agreements provide for the development, leasing and management of convenience retail, specialty retail, food and beverage and certain other passenger services in Terminals 1, 2, 3, 6, TBIT and the Theme Building. In support of the development activities required in the TCM agreements, the TCM and its concession tenants anticipate at least \$160.5 million in initial premise improvements and up to another \$74.5 million in non-premise (public seating, restrooms, common area enhancements, etc.) improvements to the terminal facilities and Theme Building. The details of the investment program, by facility or area, are developed in the form of a Definitive Improvement Plan (DIP) which requires LAWA review and approval. Each DIP identifies the premises to be incorporated into the respective TCM agreement and the cost of any related non-premises improvements. In accordance with the TCM agreements, the development and investment in non-premises improvements in the terminal facilities and Theme Building are capital assets to be acquired by LAWA subject to Board approval of each DIP.

The Terminal 1 Concessions project is ongoing through the third quarter of 2018.

Terminal 1

LAX

Southwest Airlines is undergoing a major renovation program for Terminal 1. These renovations include: improvements to the passenger security screening checkpoint; the design and implementation of a new inline Checked Baggage Inspection System and baggage sorting system; upgraded holdrooms and associated building infrastructure; refurbished arrival/baggage claim area; replacement of the passenger boarding bridges; renovations to airline support office space; and the replacement of aircraft paving sections and associated fuel hydrant pit locations.

Through December 2017, the structural steel expansion at the Gate 14 bump-out was completed. Substantial completion for this project has been impacted by four months due to apron pavement changes required to implement the Terminal 1.5 program. The overall project is anticipated to be complete in the fourth quarter of 2018.

Ticket Lobby

Terminal 1.5 Program

LAX

This project provides a vertical core terminal between Terminal 1 and Terminal 2, also a facility to process passengers; including new ticketing areas, and passenger / baggage screening capabilities. Work includes a baggage claim facility, secure and non-secure connections between Terminals 1 and 2, along with a bus port to provide airside connection to other terminals and additional office space.

Through December 2017, demolition of the Skycap at Terminal 1 is complete and the test pile program is underway.

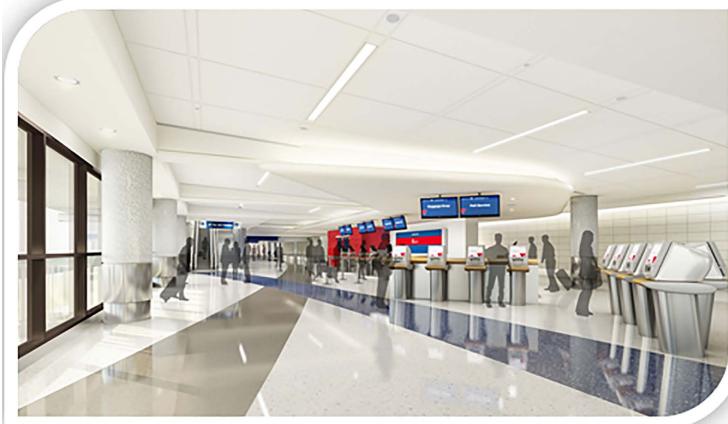

Proposition O - Argo Drain Sub-basin Facility

LAX

This project will assist the City in complying with the Santa Monica Bay Beaches Wet Weather Bacteria Total Maximum Daily Load regulations, and LAWA's compliance with Industrial General Permit, MS4 Permit and Low Impact Development requirements. Stormwater flows will be diverted and captured from two existing stormdrain systems. The diverted runoff will be treated through the implementation of different elements including a clarifier and Underground Infiltration Gallery. The treated flows will eventually infiltrate into the soil.

This project is managed by the Los Angeles Bureau of Engineering and is in the contract procurement phase. The contract award is anticipated in January 2018 and the construction NTP is scheduled shortly thereafter.

Delta 2017 Move Program

LAX

This program includes minimum improvements to T2, T3, T5, T6, and TBIT in order to relocate the airlines currently located in T2 and T3 to T5, T6 and TBIT; and relocate Delta from T5 and T6 to T2 and T3. Scope includes improvements to public spaces, bus gates, ticketing space, IT, support and office space, airline club, gating reconfigurations and new PBB at TBIT and relocation of airlines.

During December 2017, the contractor continues addressing deviations and the testing and commissioning activities. The project schedule has been impacted by contractor productivity issues and the completion date is revised to the first quarter of 2018.

T2/3 Modernization Program (by Delta)

LAX

This program includes upgrading the T2 concourse, including construction of additional floor area and reconfiguring existing passenger gate positions; the demolition and reconstruction of the T3 concourse building to provide additional concourse area, including a new operation control center; the demolition of the southern appendages of the T3 satellite; extensive renovation of the T3 satellite; the demolition and reconstruction of the ticketing buildings at T2 and T3, including new facilities for passenger and baggage screening, ticketing, and baggage claim; and, a secure connector between T2 and T3. The proposed project also includes apron improvements, specifically the resurfacing, restriping, and relocation of fuel pits.

The coordination efforts between Delta Airlines and the Planning & Development Group are underway and the implementation schedule is being developed.

Terminal 7 and 8

LAX

United Airlines is preparing a major renovation program for Terminal 7 and 8. These renovations include: improvements to the passenger SSCP; the design and implementation of a new inline CBIS and baggage sorting system for Terminals 7 and 8; upgraded holdrooms and associated building infrastructure; refurbished arrival/baggage claim area; replacement of the passenger boarding bridges; renovations to airline support office space; and constructing a new premium lounge and support office space.

Through December 2017, the contractor completed work in the international hold rooms at the southern end of the Terminal and they were opened for operation. The overall redevelopment program is anticipated to be complete in the second quarter of 2018.

Notes:

1. The Estimate Column provides an overall order-of-magnitude forecast of the acquisition cost. It is for planning purposes only and will vary as the scope is refined and the design is progressed. A project will move into the Element and a budget will be established when the Board of Airport Commissioners (BOAC) approves the scope.
2. This report is for project management purposes only. Amounts shown above as "Incurred to Date" for projects may reflect aggregate amounts for multiple project components tracked in LAWA's financial system. These amounts may differ from those reflected in LAWA's accounting systems, due to the timing of expense recognition or other accounting practices, and should not be relied upon for investment purposes.

User's Guide - Budget Reports

The information provided herein is designed to furnish users of the Planning and Development Group (PDG) Budget Reports with greater knowledge and a better understanding of the composition of the various components of the budget report.

Baseline Budget – For projects in Capital Budget 1, it is the estimated cost of the project as it was reported in the November 2009 report with the exception of the Crossfield Taxiway project, which is from the February 2009 Operating Statement (OS) budget report, and Taxilane T Phase 2, which is based on the Board award value. For projects in Capital Budget 2 and 3, it is determined when the contract is awarded by the Board.

Current Budget - Is the estimated cost of the project as it was planned plus or minus any processed revisions.

Committed to Date - Is the total contractual obligation to date for the project, e.g. awarded design contracts, awarded construction contracts, authorized task orders, etc.

Incurred to Date - Is the total of invoices received to date for the project.

Estimate at Completion (EAC) - Is the latest estimate of the total cost of the project.

Variance - Is the difference between Current Budget minus Estimate at Completion (EAC).

(dollars in thousands)
