

# Airport Analytics:

## Demystifying Data, Developing Strategies

Marc Patterson, Vice President of Products, Boingo Wireless

Sept. 7, 2014

# Airport Analytics: A Hot Topic

80% plan  
to invest in BI  
by 2016

60% to  
refresh their  
IT tech for LBS,  
analytics

70% to offer  
mobile services  
to customers

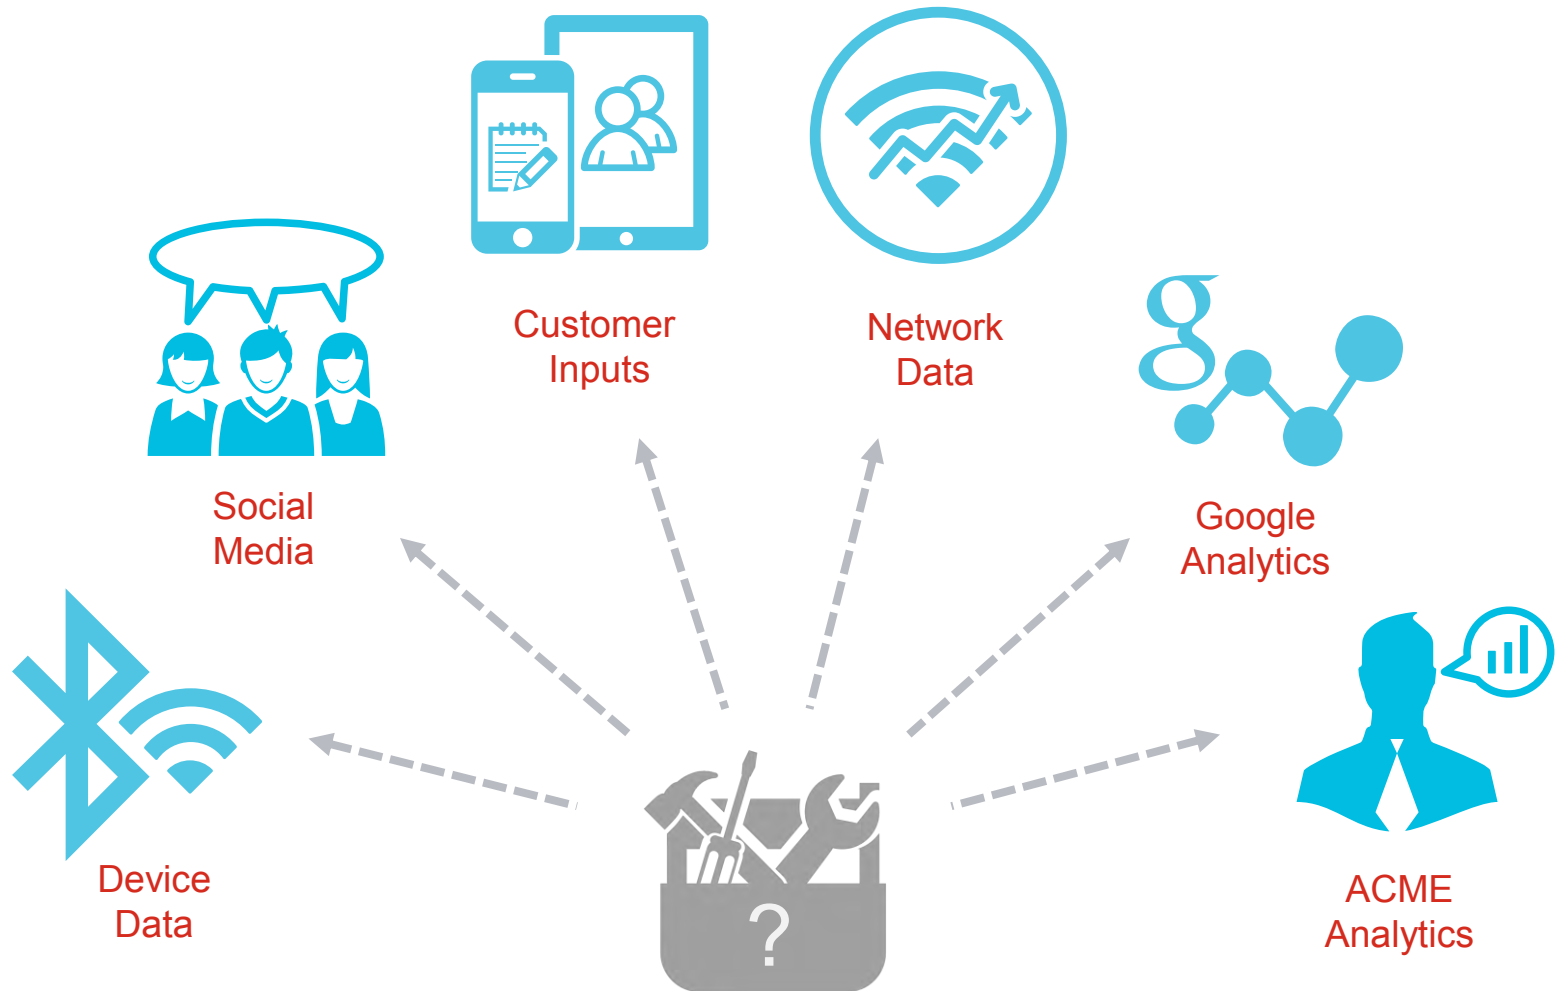

Only 8%  
have access  
to quality data

# Airport Analytics: What's in the Toolbox

Data analytics tools are plentiful, but synthesizing data from multiple sources remains tough

“Think about the tremendous good that can come from people sharing information with the right people in the right ways.”

- Larry Page, Google

Perception

VS.

Pursuit

# The Potential of Airport Analytics

Tremendous potential exists to understand, serve traveler needs, preferences, patterns

Amenities

Rentals

Hotels

Restaurants

# Analytics in Action: SEA-TAC

# The Future is Here: Predictive Analytics

Walled garden Visitors for 2014

Predictive analytics provides insights into Wi-Fi usage growth

## Benefits:

- Plan for increased demand
- Improve response to disruption
- Increase customer satisfaction

## Factors influencing passenger Wi-Fi usage include:

- Venue
- Device choice & mix
- Time of day/ week
- Seasonal/ holiday patterns
- International vs. domestic travel

Connects by Device Category for 2014

# Predictive Analytics: Opportunities

## Passenger Behavior

- Industry/Like-Airport Comparisons
- Passenger Transit
- Wi-Fi Utilization

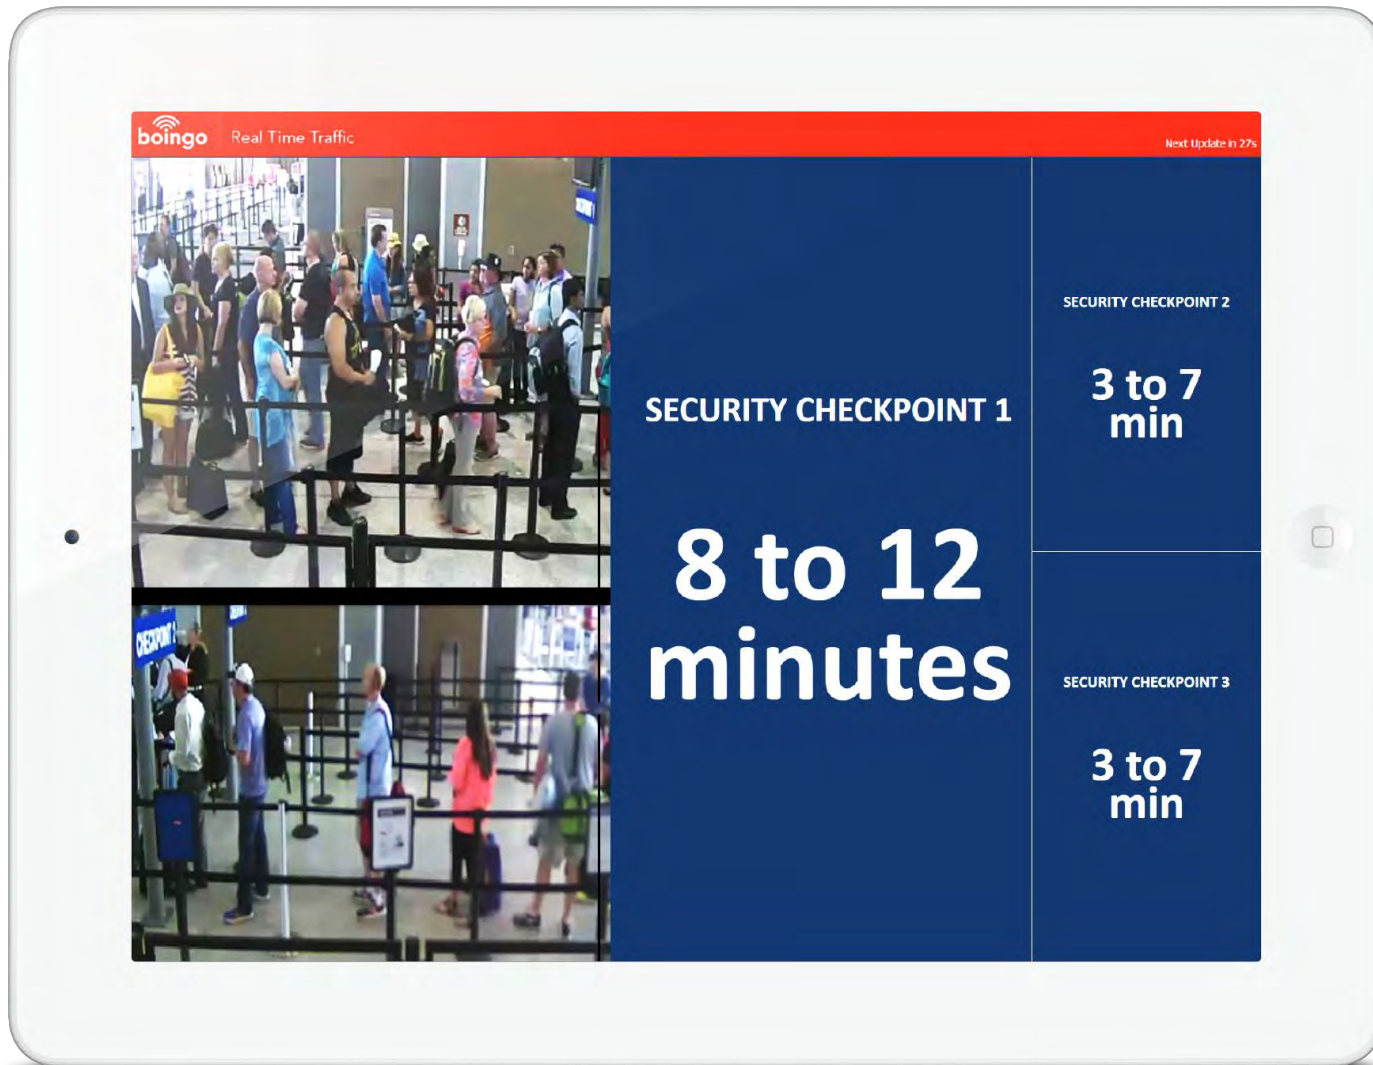

## Driving Factors

- Demographics
- Preferences
- Venue Location
- Time of Day
- Seasons & Holidays

# Real-Time Location-Based Services

# Future Airport Use Cases

---

## Safety/Security

Real-time breach counts  
Passenger counts during  
emergencies

## Construction

Impact of signage changes  
Before/after foot traffic  
patterns

## Business Development

Competitive advantage  
for airport  
concessions/services

# Designing Smarter Networks

## Airport Example – Current Design

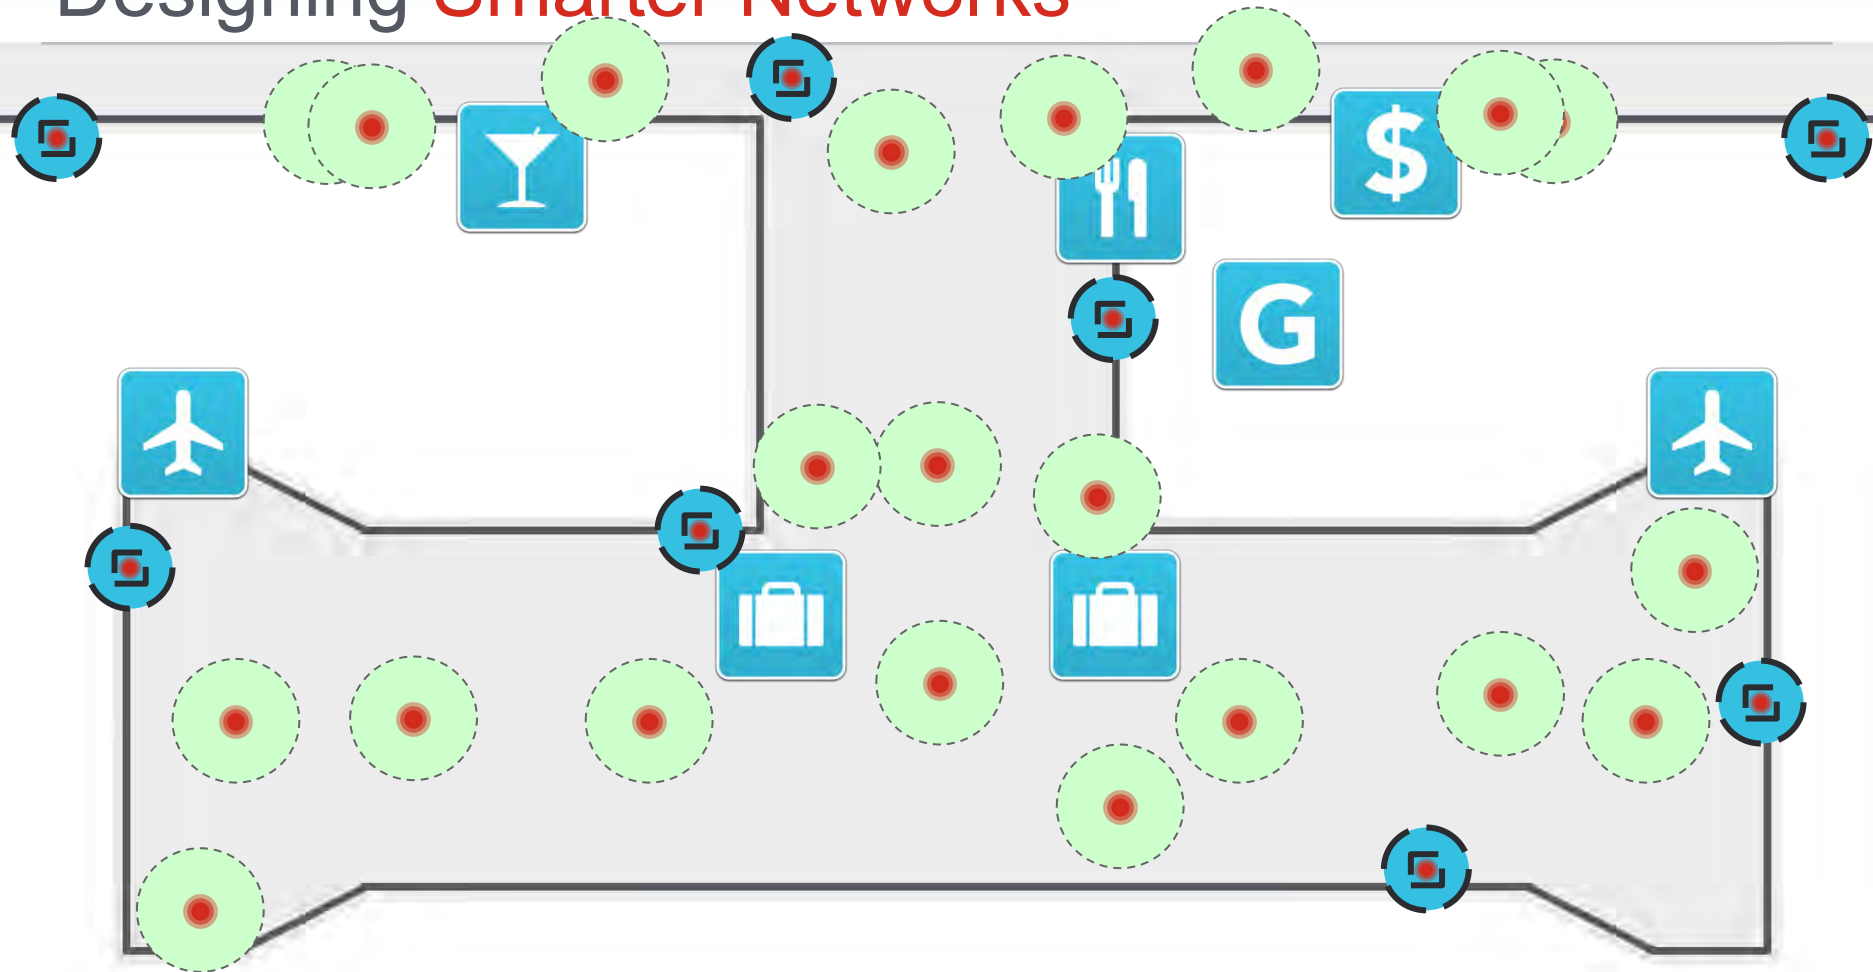

- 20M enplanements/year
- 76 Access Points
- 802.11ag

## Design Challenges

- Slow connections (Mb backbone)
- Poor ASQ ratings
- Limited/linear passenger visibility

# Designing Smarter Networks

## Revised Network Design

- 20M enplanements/year
- 300+ Access Points
- 802.11ac / 802.11n
- Passpoint compliant

## Design Improvements

- xMb connections (xGb Cat6 backbone)
- Venue-controlled experience (CMS)
- Location-Based Triangulation
- Pre-cabled for DAS

Analytics =  
Understanding  
relationships

Understanding,  
justifying cost

Code of Conduct:  
Balance the value

Location-based  
services are  
the medium.  
Analytics is  
the value.

# Thank You!
